

10 Gigabit Router Fiber Optic Port

AI Overview

To connect a 10G router to a fiber optic port, use an Optical Network Terminal (ONT) or SFP+ module to convert the optical signal to electrical Ethernet, then link it to your router's 10G port.

Required Equipment

- Optical Network Terminal (ONT): Converts the incoming fiber signal into an electrical signal compatible with your router . Some 10G routers have integrated ONTs.
- 10G Router: Ensure it has 10G-capable WAN or SFP+ ports .
- Fiber Optic Cable: Single-mode or multimode depending on your ISP and distance, typically with LC, SC, or ST connectors .
- SFP+ Transceiver (if needed): For routers with SFP+ slots, choose a module compatible with your fiber type (e.g., 10G LR for single-mode, 10G SR for multimode), .
- High-Quality Ethernet Cable: Cat6a or higher for connecting ONT to router if using Ethernet output .

Step-by-Step Connection

-

Install the ONT

- Locate the fiber wall outlet provided by your ISP.
- Connect the fiber optic cable from the wall to the ONT's optical input port.
