

110 Cable Management Rack Quota

AI Overview

A 110 cable management rack typically supports 100- to 300-pair configurations, with 1 RMS or 2 RMS sizes for standard 19-inch rack installations.

Capacity and Pair Quota

The quota of a 110 cable management rack depends on the specific model and whether it includes cable managers:

- **S110 Panels:** These panels allow wiring blocks to be mounted directly to a 19-inch EIA rack. Panels without cable managers are available in 100-, 200-, and 300-pair configurations, while panels with integrated cable managers are available in 100- and 200-pair versions. Each 25-pair termination strip includes connecting blocks that terminate 22–26 AWG solid or 7-strand wires, ensuring full utilization of the panel's capacity .
- **ICC 110 Patch Panel Cable Management:** These units are designed to organize and route cables in rack-mounted structured cabling systems. They install in standard 19-inch racks and are used with 110 wiring block patch panels to maintain clean cable paths. The 1 RMS panel size is standard for most installations, providing sufficient space for typical 110 block terminations .

Rack Mounting and Space Considerations

- **1 RMS and 2 RMS Sizes:** The 110 cable management units come in 1 RMS (rack mount space) or 2 RMS sizes, allowing flexibility depending on the number of cables and the depth of the rack .
