

# 48-core optical distribution module

## AI Overview

A 48-core optical distribution module (ODF) is a high-density fiber management unit designed for terminating, distributing, and organizing up to 48 optical fibers in data centers, telecom rooms, and FTTH networks.

### Overview

A 48-core ODF is a modular fiber optic distribution frame that provides efficient termination, branching, and storage of optical fibers. It serves as an interface between optical transmission networks, devices, and cables, ensuring organized fiber management and reliable connectivity . These modules are widely used in FTTH access networks, data centers, central offices, and telecommunication rooms .

### Key Features

- High-density capacity: Supports up to 48 fibers, with options for 12, 24, 72, 96, or 144 cores for scalability .
- Adapter compatibility: Available with LC, SC, or FC adapters, including simplex or duplex configurations .
- Rack integration: Compatible with standard 19" and 23" racks, often in 2U or 3U heights, with front and rear access for easy installation and maintenance .
- Splice and patch management: Equipped with splice trays, guides, and pigtail holders to maintain fiber bend radius and prevent signal loss .
- Flexible installation: Cable entry and patch cord exits can be configured from left or right, front or rear, allowing adaptable deployment in various network layouts .
