

Acrylic shielding for distribution boxes

AI Overview

Acrylic shielding provides a lightweight, transparent, and customizable protective enclosure for distribution boxes, suitable for dust, debris, and tampering protection.

Overview

Acrylic distribution boxes are designed to protect electronic components while allowing visibility of the internal circuitry. They are lightweight, durable, and can be fabricated in various sizes to fit specific applications, from small prototype boxes to industrial enclosures. Acrylic is particularly advantageous for applications where visual inspection is important without opening the box.

Design and Customization

Acrylic boxes can be custom-made to exact dimensions and feature specifications. Options include:

- Locking mechanisms for security and controlled access
 - Heat-resistant materials for environments with elevated temperatures
 - Custom cutouts for switches, connectors, or ventilation
 - Lid designs that fit securely or include EMI gaskets for improved shielding
- Advanced fabrication techniques such as CNC machining and laser cutting allow precise, complex designs suitable for both single units and bulk production. Some models also incorporate corner support columns and extruded aluminum pillars for added structural strength.

Shielding and Protection
