

Angola Telecom-Grade Router OSFP

AI Overview

OSFP (Octal Small Form Factor Pluggable) modules provide high-speed, scalable, and thermally optimized connectivity for telecom-grade routers, supporting up to 800Gbps per port.

Overview of OSFP

OSFP is an open standard pluggable optical transceiver designed for high-density, high-performance networks, including telecom and data center environments . It supports eight electrical lanes per module, each capable of 100G PAM4 signaling, enabling total bandwidths of 400G or 800G depending on configuration . OSFP modules are engineered for thermal efficiency, handling power dissipation up to 15-20W, which is critical for telecom-grade routers operating under continuous high load .

Key Features for Telecom-Grade Routers

- **High Bandwidth:** OSFP modules support 800GE, 400GE, 200GE, and 100GE connectivity, allowing flexible deployment in core, distribution, and AI-driven networks .
- **Thermal Management:** The slightly larger form factor compared to QSFP-DD allows better heat dissipation, ensuring stable operation in high-density router environments .
- **Signal Integrity:** OSFP connectors maintain high signal quality at extreme speeds, which is essential for reliable packet forwarding in telecom networks .
