

Applications of ST-type fiber optic connectors

Overview

The ST connector (Straight Tip) was one of the first widely adopted fiber optic connectors and remains in use in legacy networks, military systems, and some industrial applications. At its core, the ST connector's design is all about ensuring a precise and unshakeable connection between two optical fibers. Your data is just pulses of light zipping through hair-thin glass strands. The bayonet-style coupling system they utilize ensures a safe connection can be established that won't fail easily, making them excellent for situations where reliability is essential. ST Connectors, also known as "Straight Tip" or BFOC (Bayonet Fiber Optic Connector), were developed by AT&T in the mid-1980s as a cost-effective and space saving alternative to the larger Biconic Connector.
