Overview

Our Aerospace specific Primary Power Distribution unit (PDU) provides primary power bus connectivity, transfer, and distribution functions to the aircraft loads. It includes a combination of electro-mechanical power contactors and solid state switches to control the power into and out of the unit. Experience modular concept in our designs achieving significant weight and volume savings. Primary distribution. This primary distribution system ensures that electrical power is always available, with network management between essential and non-essential loads. 115VAC PDU has three phase inputs. There are voltage and current measurement units in the 115VAC PDU device. Certified and flying today on multiple platforms, the Astronics' CorePower system deploys.
