

Cable finder used for optical cables

Overview

The Visual Fault Finder is a visible laser light source used to check continuity, locate breaks, poor mechanical splices and damaged connectors in fibre optic cabling. The optical cable identifier is the first intelligent high-precision testing instrument equipped with multiple functions such as cloud wireless transmission and smart optical cloud platform. It adopts an 8-inch capacitive full-touch screen supporting multi-point touch, Integrated optical cable. Optical Fiber Identifiers - Identify optical fibers without the need to disconnect or cut the fiber. An OFI is an important tool for field technicians - assuring. 9-in-1 Cable Testing Multifunctionality: Combines 9 key functions including wire mapping, digital cable tracing, port flashing, cable length measurement, PoE checking, crimping test, OPM (optical power meter), VFL (visual fault location), and NCV (non-contact voltage) test, streamlining network. Karono 10mW (8-12KM) visual fault locator is used for the measurement in single-mode or multi-mode fibers. Spring into certainty with smarter testing and maximum savings.
