

Cable tray fixing nails

AI Overview

Use nail-in cable clips or specialized cable tray fixing accessories to securely fasten cables and covers to walls or trays.

Types of Nail-In Cable Clips

Plastic cable clips with integrated nails are commonly used for securing cables along walls, baseboards, or ceilings. They come in various sizes to accommodate different cable diameters, typically ranging from 4mm to 10mm for small to medium cables . The clips are made from durable, UV-stabilized plastic and often include hardened steel or high-carbon nails that resist corrosion, acid, and aging, making them suitable for indoor and outdoor use . Coaxial or Ethernet-specific clips feature a curved design to protect cable insulation while holding the cable firmly in place. These clips allow for quick installation with a hammer and prevent cables from sagging or tangling .

Cable Tray Cover Fixing Accessories

For cable trays, specialized fixing accessories are available to secure tray covers. These include snap-on clips or pressure-fit fasteners made from stainless steel, which resist rust and provide a stable connection without welding . The clip design typically allows the main body to sit inside the tray while a smaller part grips the cover, ensuring the cover does not rattle or shift.

Installation Tips

- Select the right size clip for your cable diameter. If the exact size is unavailable, slightly larger clips can be used with electrical tape to secure the cable .
- Surface preparation: Nail-in clips can be installed on wood, plaster, brick, or cement walls. For concrete or masonry, use longer nails or anchors for a secure hold .
