

Construction of Outdoor Fireproof Cable Trays

Overview

Cable trays and busways at floor level or at slab penetrations shall have a waterstop no less than 50 mm in height. At slab penetrations, provide 20–30 mm of firestopping and install a fire-support plate at the top. Sealing shall be tight and reliable, without visible cracks. Cable tray installation must comply with specific technical standards to ensure electrical safety, system reliability, and long-term maintainability. This document outlines the key requirements for cable tray layout, installation, and fireproofing in industrial and commercial environments. This system shall be designated for application on steel or aluminum cable trays.

Article Content

Cable Tray Covering & Fire Protection

Install fire-resistant wraps, blankets, and coverings around cable trays and conductors. Build fire-rated enclosures around tray runs, transitions, and penetrations to block flame and smoke movement.
