

Custom Processing of Distribution Boxes and Cabinets

AI Overview

Custom distribution boxes and cabinets are designed, fabricated, and tested according to specific electrical, mechanical, and environmental requirements, ensuring precise fit, functionality, and compliance with standards.

Overview of Custom Distribution Box Processing

Custom distribution boxes and cabinets are essential for power distribution, control, and protection in industrial, commercial, and renewable energy applications. The customization process ensures that each unit meets the specific electrical parameters, installation environment, and functional requirements of the customer .

Key Steps in Custom Processing

1. Requirement Confirmation The process begins with gathering detailed customer requirements, including:

- Rated voltage and current
 - Types and quantities of electrical components (circuit breakers, contactors, motor protectors)
 - Functional needs (main distribution, control, protection)
 - Physical dimensions, installation environment, and special features
2. Design and Engineering Engineers create CAD drawings and 3D models to define:
- Component layout and wiring paths
