

Distribution box IP55 standard

AI Overview

An IP55-rated distribution box provides full protection against dust and defends against low-pressure water jets, making it suitable for semi-outdoor or industrial environments.

Understanding IP55

The IP (Ingress Protection) rating consists of two digits: the first indicates protection against solid particles, and the second against liquids. For IP55:

- First digit “5”: The enclosure is protected against dust to a level that prevents interference with the operation of internal equipment. It is not completely dust-tight, but any dust that enters will not harm functionality .
- Second digit “5”: The enclosure can withstand low-pressure water jets from any direction, protecting the equipment from rain, splashes, or routine external washing . This makes IP55 suitable for semi-outdoor locations, such as covered patios, garages, warehouses, or sheltered industrial areas where occasional water exposure occurs .

Suitable Applications

IP55 distribution boxes are commonly used in:

- Industrial environments with airborne dust from machinery .
- Greenhouses or indoor farms with high humidity .
- Laboratories where chemical splashes may occur .
