

Distribution box cover type

AI Overview

Distribution box covers vary by material, mounting style, and protection level, including metal, plastic, surface-mounted, and flush-mounted options.

Cover Materials

Distribution box covers are typically made from durable materials to ensure safety and longevity:

- **Metal Covers:** Often stainless steel or powder-coated steel, providing high mechanical strength, impact resistance, and durability, suitable for industrial and outdoor environments .
- **Plastic Covers:** Made from engineering thermoplastics like Polycarbonate (PC) or Acrylonitrile Styrene Acrylate (ASA), offering lightweight, corrosion resistance, and ease of handling, commonly used in residential or light commercial applications .

Mounting Styles

The cover type is also influenced by the installation method:

- **Surface-Mounted Covers:** The box is installed on the wall surface, and the cover is designed for easy access and maintenance. Ideal for industrial or outdoor settings where quick access is needed .
- **Flush-Mounted Covers:** The box is embedded within the wall, providing a cleaner, more aesthetic look for indoor installations. The cover sits flush with the wall surface, often used in modern homes and offices .
