

Distribution box model DBX

Overview

The dbx dB10 is a passive DI box featuring a high-quality transformer, ensuring your signal remains pure and uncolored while minimizing unwanted noise and interference. One look at our new dB10 Passive and dB12 Active direct boxes will tell you that these are clearly different. Utilizing custom dbx mu-metal-shielded. This passive two-channel DI box converts the unbalanced signal from two instruments or other input sources, via an isolation transformer, to two balanced channels for use with stage or studio equipment. It is suitable for connecting Hi-Z sources or other devices with unbalanced outputs. The distribution box (DB box) helps safely and efficiently distribute electrical power. Today, electrical systems are essential for homes and industries.
