

Distribution box with plug and socket

AI Overview

A distribution box with plug and socket is an electrical enclosure designed to safely distribute power to multiple devices, often featuring circuit protection, modular outlets, and IP-rated enclosures for industrial or outdoor use.

Overview

A distribution box with plug and socket serves as a centralized point to distribute electrical power from a single source to multiple devices. These boxes are widely used in construction sites, industrial facilities, outdoor events, and temporary installations where reliable and safe power distribution is critical .

Key Features

- **Enclosure and Protection:** Boxes are made from durable materials like ABS plastic or metal, often rated IP44 to IP67 to protect against dust, water, and environmental exposure .
- **Plug and Socket Types:** Industrial boxes may use IEC309, NEMA, or PowerCON connectors, while sensor/actuator boxes use M12 or M23 connectors for modular connections .
- **Circuit Protection:** Many boxes include circuit breakers, leakage protection, and branch protection to prevent overloads and ensure safety for connected devices .
- **Modularity:** Some boxes allow customizable internal components, such as adding or removing sockets, breakers, or transformers, to suit specific operational needs .
