

Empty Space Filler Panel Distribution Box

AI Overview

Empty space filler panels are used to safely cover unused breaker slots in distribution boxes, preventing accidental contact and maintaining panel integrity.

Purpose and Benefits

Filler panels, also called blank plates or filler plates, are designed to cover empty spaces in load centers or panelboards. They enhance safety by preventing accidental contact with live electrical components, improve the panel's appearance, and help maintain compliance with electrical codes. They are commonly used when breakers are removed or when a panel has unused slots.

Types and Sizes

Filler panels come in various sizes and configurations depending on the panel type:

- ABB Spectra Series: Plug-in or bolt-on filler plates with support brackets, designed for vertical panel spaces of 1 3/8 inches (1X), suitable for Spectra+ and Spectra Power panels .
- Schneider Electric I-Line HLW1BL: Blank plates for 1.5-inch wide spaces, compatible with breakers without Micrologic trip .
