

Fc pigtail fiber lc

AI Overview

An FC-LC fiber pigtail is a short optical fiber cable with an FC connector on one end and an LC connector on the other, designed for splicing and high-performance network connections.

What is a Fiber Pigtail?

A fiber optic pigtail is a short length of optical fiber with a factory-terminated connector on one end and a bare fiber on the other. The bare end is intended for permanent splicing—either fusion or mechanical—to an incoming fiber cable, while the connector end plugs into equipment, patch panels, or optical distribution frames. This design ensures low-loss, reliable connections and combines the precision of factory connectors with the flexibility of field splicing .

FC and LC Connectors

- **FC Connector:** Features a screw-on metallic body with a high-precision ceramic ferrule, providing a secure connection ideal for high-vibration or testing environments. FC connectors are commonly used in single-mode fiber applications where stability and low back reflection are critical .
- **LC Connector:** A small form-factor connector with a 1.25mm ferrule, designed for high-density installations. LC connectors are widely used in data centers and LANs due to their compact size and ease of use .
