

Fiber Optic Cabling Media

Overview

Fiber-optic cabling is widely used for high-speed Ethernet links over relatively long distances. It uses glass or plastic fiber as a medium through which light is "guided" to the other end of the link. Fiber media converters allow you to connect two different types of network infrastructure: fiber-optic and copper (Ethernet). In this blog post, Welcome to the Fiber Optic Cables Introduction Guide, your essential resource for navigating fiber optic technology. The fiber-optic cable itself has several layers made from different materials and having. There are different types of fiber optic cables because each type is optimized for specific applications that have unique requirements for bandwidth, transmission distance, and environmental factors.
