

Fiber Optic Router Reset Method

AI Overview

You can reset your fiber optic router by performing either a soft restart or a hard factory reset, depending on the severity of your connectivity issues.

Soft Reset (Restart)

A soft reset is a simple way to clear minor glitches without erasing your settings:

- Power off the router: Use the power button or unplug the power cable from the router.
- Wait: Pause for 30-60 seconds to allow the router to clear its memory and temporary errors.
- Power on the router: Plug it back in or press the power button.
- Check the lights: Wait until all indicator lights stabilize, indicating the router is fully powered and ready.
- Test your connection: Open a webpage or stream a video to ensure the internet is working properly .

Hard Reset (Factory Reset)

A hard reset restores the router to its original factory settings, erasing Wi-Fi names, passwords, and custom configurations:

- Locate the reset button: Usually a small recessed button on the back or bottom of the router. You may need a pin or paperclip to press it .
- Power off the router: Unplug the power cable or switch off the device.
