

# Fiber Optic Wired Router Connection Method

Equipped with a removable **Mounting Plate** inside the enclosure, enabling customized drilling and secure component mounting.

## AI Overview

To establish a wired connection for a fiber optic router, use an Optical Network Terminal (ONT) to convert the fiber signal to Ethernet, then connect it to your router via a high-quality Ethernet cable.

### Required Equipment

- Optical Network Terminal (ONT): Converts incoming fiber optic light signals into electrical signals your router can use. Typically provided by your ISP and may be wall-mounted for stability .
- Fiber Optic Cable: Connects the ISP's fiber outlet to the ONT. Residential setups usually use single-mode SC/APC connectors .
- Ethernet Cable: Cat6 or Cat6a is recommended to maintain high-speed data transfer up to 10 Gbps .
- Fiber-Ready Router: Ensure your router supports gigabit speeds or higher, ideally Wi-Fi 6 or Wi-Fi 6e for optimal performance .

### Step-by-Step Wired Connection

- Install the ONT:
- Locate the fiber optic wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable from the wall outlet to the ONT's designated port.
- Power on the ONT and wait for the status lights to stabilize (usually 2-5 minutes), .
