

Flip-up photoelectric distribution box

AI Overview

A flip-up photoelectric distribution box is a compact, versatile device that integrates electrical and optical distribution, allowing easy access and secure management of power and fiber connections.

Overview

A flip-up photoelectric distribution box combines modular electrical outlets with fiber optic distribution capabilities, designed for both indoor and outdoor applications. These boxes typically feature a flip-up lid or cover that provides immediate access to sockets or fiber ports while maintaining a flush, safe surface when closed, making them ideal for offices, meeting rooms, corridors, or outdoor telecom installations .

Key Features

- **Modular Design:** Supports multiple types of sockets, including power, USB, multimedia, and fiber optic ports. Some models allow up to 6 modular sockets or 24 fiber ports .
- **Automatic Cable Clamping:** Advanced photoelectric boxes include movable clamping plates that automatically secure the main optical cable when the lid is closed, improving installation efficiency and reducing manual assembly .
- **Durable Construction:** Designed to withstand environmental stress, including vertical pressure up to 500N, and often IP54-rated for dust and water resistance, suitable for outdoor or corridor installations .
- **Flexible Installation:** Can be mounted in floors, walls, or poles, and supports overhead or hanging installations for telecom or smart city applications .
