

Function of the automatic sealing device for junction boxes

Overview

An Automatic sealing machine production line for junction boxes is an integrated automation system designed to apply sealing materials with controlled precision while supporting continuous, repeatable, and flexible production. This type of system is no longer a luxury, but a necessity for. The ECOJ-BOX A revolutionizes J-box sealing in solar panel assembly with its fully automatic silicone dispensing system. This station is equipped with an XY robot that ensures precise and consistent silicone or glue application, significantly reducing common errors associated with manual methods. Why use Roxtec?

High cable density transit devices for Ex environments with a frame in acid proof. Fortasun™ PV junction box adhesives/sealants - one-part room temperature cure. Automatic sealing machines play an important role in the modern manufacturing and packaging industry through their advantages of high efficiency, high quality sealing, cost reduction, versatility, simplified operation, improved safety and hygiene requirements, intelligence and flexibility, and. It is achieved through the automated, contour-accurate application of a liquid seal consisting of two components that flow seamlessly into one another at its coupling point. As a result, it is almost invisible. The cut edges of glued-in seals are therefore avoided. After foaming and curing at room.
