

How many ONUs can one optical splitter support

Overview

An OLT PON port can theoretically support up to 64 ONUs in EPON and up to 128 ONUs in GPON. However, the ideal split ratio depends on multiple real-world factors including bandwidth demand, service type, fiber distance, and optical power loss. In fiber optic networks, especially in FTTx deployments, the number of Optical Network Units (ONUs) that a single PON port on an Optical Line Terminal (OLT) can support directly affects network planning, cost-efficiency, and service scalability. In this article, we'll explain the concept of split. OLT is the central office equipment in optical access networks, connecting to metro or backbone networks and providing data aggregation, forwarding, and management for multiple Optical Network Units (ONUs). The OLT port acts as the aggregation point, transmitting downstream data and receiving upstream traffic from multiple end-users. PON has attracted much attention in recent years due to its low cost and high performance. □ Passive Device — No power required □ Used in FTTH, GPON & PON networks □ Supports multiple split ratios (1x2, 1x4, 1x8, 1x16, 1x32, etc.) □ High reliability with low.

Article Content

What is Fiber Optical Splitter? Which Parameters Affect Its Function

The optical splitter distributes the transmitted optical signal in one optical fiber to multiple optical fibers. There are many types of distribution, 1×2 , 1×4 , $1 \times N$, or 2×4 , $M \times N$.

Introduction to Passive Optical Network Splitter Architectures

Fiber Broadband Association Technology Committee February 2025 The choice of splitter architecture for a passive optical network (PON) network can impact many aspects of a Fiber to the X (FTTx)

What are OLT, ONU, ONT and ODN in PON?

A GEAPON system usually consists of an OLT (Optical Line Terminal) at the service provider's central office and multiple ONU (Optical Network Units)

Optical Line Terminal (OLT) Core of Optical Access Network

The splitting ratio (e.g., 1:8, 1:16, 1:32, 1:64) represents the number of ONUs sharing the optical power and bandwidth from one OLT port, with higher ratios enabling more subscribers but potentially

Optical Splitters Demystified: The Silent Heroes

An Optical Splitter, also known as a beam splitter, is a passive optical device that divides a single input optical signal into two or more output

Understanding Optical Splitters: Are They Bidirectional?

Most traditional optical splitters are not inherently bidirectional; they are designed primarily for unidirectional splitting from one source to multiple outputs.

Do You Know How to Place and Use the Optical Splitter?

In the realm of optical communication networks, the optical splitter serves a vital role in dividing and distributing optical signals efficiently. Understanding how to properly place and use an

What Is an Optical Splitter?

Fiber optic splitter, also referred to as optical splitter, fiber splitter or beam splitter, is an integrated waveguide optical power distribution device that

Optical Splitters in Modern Networks

Multimode optical splitters are optimized for 850nm and 1310nm operation, whereas single-mode optical splitters are optimized for 1310nm and

How Many ONUs Can an OLT PON Port Support?

An OLT PON port can theoretically support up to 64 ONUs in EPON and up to 128 ONUs in GPON. However, the ideal split ratio depends on multiple

Optical Splitters: Split Ratios, Splitting Architectures & PON Network ...

Optical splitters are the key passive component that enables “sharing” of OLT resources: Cost Efficiency: A single OLT port can serve 8-64 ONTs via a splitter, reducing the number of OLTs,

Understand GPON Technology

Optical Distribution Network (ODN) - The physical fibre and optical devices that distribute signals to users in a telecommunications network. The

Primary and secondary optical splitters in FTTH networks

Like coaxial cable transmission system, optical network system also needs to couple, branch and distribute optical signal, which needs optical splitter

The Working Principle and Application Scenarios of

Fiber optic splitters are essential passive devices in modern optical communication systems, enabling the division of a single light signal into multiple

Optical Line Terminal (OLT) Core of Optical Access Network

It can connect multiple ONUs, supporting large-scale user access and being suitable for broadband access in residential areas, commercial buildings, and other places.

Meet Escalating Broadband Demand with Fiber to the Home

The downstream and upstream optical wavelengths are split by the optical splitter, so the correct wavelength is routed to the receive diode. The receive diode converts the signal from the optical

Introduction to Passive Optical Network Splitter Architectures

In this configuration, typically more than one splitter is located in a cabinet some distance away from the OLT. Fewer fibers are used on the side of the network feeding the splitter.

Your Go-to Guide to Optical Splitter

The optical splitter is an optical power distribution device that splits one optical signal into multiple optical fiber signals to achieve multichannel transmission.

Optical Splitters are used in PON (Passive Optical Network ...

PON consists of an optical line terminal (OLT) at the service provider's central office and optical network units (ONUs) near or at the end users location. A PON reduces the amount of fibers and central

Fiber-optic splitter

According to the principle, fiber optic splitters can be divided into Fused Biconical Taper (FBT) splitter and Planar Lightwave Circuit (PLC) splitters. The FBT splitter is one of the most common. FBT

PLC Splitter for FTTH & GPON Networks Explained

It allows a single optical signal from the OLT to be distributed efficiently to multiple ONTs/ONUs with minimal signal loss. Passive Device — No power required Used in FTTH, GPON & PON networks ...

Understanding the Split Ratios and Splitting Level of Optical Splitters

The use of optical splitters in PON allows the service provider to conserve fibers in the backbone, essentially using one fiber to feed as many as 64 end users. A typical split ratio in a PON ...

Understanding The Split Ratios And Splitting Level Of Optical Splitters

This article has reviewed some information about the split ratios and splitting level of fiber optic splitters. It is very essential to make clear all these different configurations, or the network performance will be

Fiber Optic Splitters – Selection Guide for FTTH Networks

A fiber optic splitter is a passive device that divides one optical input into multiple outputs. It enables one signal source (OLT) to serve multiple

A Guide to Optical Splits to Improve your Fiber Game! |

An optical splitter is a passive device, meaning it does not require power to operate like an optical DWDM amplifier in a fiber deep HFC. The purpose of an optical

Fiber Optic Splitters for PON Networks: 2025 Guide

What Are Fiber Optic Splitters in PON? Fiber splitters are passive devices that divide one optical input signal into multiple outputs. In PON: – One

How Many ONUs Per OLT Port? Understanding Split Ratios

It terminates the optical signal and converts it into electrical signals for home or business networks. In most FTTH deployments, each subscriber has one ONU, meaning the number of ONUs equals the

How Many ONUs Per OLT Port? Understanding Split Ratios

For example, a 1:32 splitter divides the optical signal from one OLT port into 32 separate fibers, each connecting to one ONU. Common split ratios in contemporary PON networks are 1:32, 1:64, and 1:128.

Optical Line Terminals Selection Guide: Types,

In some systems splitters are incorporated between the OLT and ONUs. The splitters permit an individual PON network interface to serve many subscribers.
