

How much does a French fire-resistant cable tray cost

AI Overview

Fire-resistant cable trays in France typically cost between €15 and €50 per meter, depending on material, fire rating, and customization.

Price Range and Material Considerations

The cost of fire-resistant cable trays varies based on material, type, and fire rating. Common materials include:

- Hot-dip galvanized steel: Strong and durable, suitable for most industrial and commercial applications; generally mid-range in price.
- Aluminum: Lightweight and corrosion-resistant, slightly more expensive than steel due to material cost and lower weight support requirements.
- FRP (Fiber-Reinforced Plastic): Ideal for corrosive environments, often at the higher end of the price spectrum. For standard fire-resistant trays, prices typically range from €15 to €50 per meter, with ladder-type trays on the higher end due to their load-bearing capacity and perforated or coated finishes increasing costs further .

Fire Rating and Compliance

Fire-resistant trays are rated for durations such as 60, 90, or 120 minutes under standards like UL, BS, or IEC. Higher fire ratings generally increase the cost due to additional material thickness or specialized coatings . Low smoke and halogen-free (LSZH) options, often required in public or enclosed spaces, also add to the price.

Supplier and Order Factors
