

How much does a Huijue 25km optical module cost

AI Overview

The cost of a Huijue 25km optical module typically ranges from \$200 to \$900, depending on brand, channel, and vendor.

Price Range Overview

For 25G SFP28 single-mode modules designed for long-distance transmission (such as 25km), prices vary significantly based on whether the module is OEM-branded or third-party compatible. Low-cost third-party modules can start around \$200-\$300, while branded or vendor-certified modules may cost \$500-\$900 through authorized resellers. The wide range reflects differences in optical quality, reliability, and support.

Factors Affecting Cost

- **Brand and OEM Status:** Modules from major manufacturers or certified vendors carry higher prices due to guaranteed performance and warranty support.
- **Transmission Distance:** Modules rated for 25km require higher optical power and precision, increasing cost compared to short-reach modules.
- **Volume and Supplier:** Bulk purchases or third-party suppliers can reduce per-unit cost significantly, sometimes under \$300 for compatible modules.
- **Engineering and Production Costs:** The cost includes chipsets, optical components, assembly, testing, and overhead, which are reflected in the final price.
