

How much tax is levied on optical modules

AI Overview

Optical modules in Germany are generally subject to the standard 19% VAT unless a specific exemption applies.

Value Added Tax (VAT)

In Germany, the standard VAT rate is 19%, which applies to most goods and services, including electronic components such as optical modules, unless a special provision reduces it. Certain high-tech components, like photovoltaic modules, benefit from a 0% VAT rate if specific conditions are met, such as being part of a system installed by the purchaser and meeting capacity thresholds. However, optical modules do not currently have a dedicated zero-rate exemption, so the standard 19% VAT generally applies.

Corporate and Trade Taxes

If optical modules are sold by a company, the business may also be subject to corporate income tax (15% plus solidarity surcharge) and municipal trade tax (7-17%) on profits derived from their sale. Non-resident companies are taxed only on Germany-sourced income, while resident companies are taxed on worldwide income.

Import Considerations

For imported optical modules, customs duties may apply depending on the product classification under the EU Combined Nomenclature. VAT is typically levied on the import value plus any customs duties.
