

How to attach transparent optical cable

Overview

Transparent optical cable is a pre-adhesive cable. It needs to be installed in three steps: Attach corner protector to the corners along the cabling path in advance ensure bending radius $\geq 5\text{mm}$. They are delivered with adhesive and can be quickly attached to suitable wall surfaces after the release film is removed. This video provides detailed instructions for routing fiber optic cables along baseboards, ceilings, and door frames, ensuring a neat, concealed, and reliable home. The indoor pre-connected transparent bow type cable (pre-adhesive cable) with hot melt adhesive is suitable for indoor cabling scenarios. Learn how to plan Wi-Fi hotspots, prepare cabling paths, assemble the installation kit, and perform various cabling techniques including baseboard. The fiber installation kit (FIK) is used to route invisible indoor optical cables.
