

How to connect lighting wires to the distribution box

AI Overview

To connect a lighting wire to a distribution box, you must safely connect the phase, neutral, and earth wires to the appropriate MCBs, RCCB, and bus bars, ensuring all connections are secure and compliant with electrical standards.

Safety First

Before starting, switch off the main power supply at the consumer unit or main breaker to prevent electric shock. Use a voltage tester to confirm that the circuit is dead before touching any wires .

Identify Components in the Distribution Box

A typical single-phase distribution box includes:

- Main Double Pole MCB: Controls the overall power supply.
- RCCB (Residual Current Circuit Breaker): Provides protection against leakage currents and electric shocks.
- Single-Pole MCBs: Protect individual lighting or socket circuits.
- Neutral and Earth Links: Distribute neutral and earth connections to all sub-circuits .

Wiring Steps

- Connect the Main Supply:
- Connect the incoming phase wire to the input terminal of the main DP MCB.
- Connect the neutral wire to the input of the RCCB.
