

How to connect the external fiber optic adapter

AI Overview

To connect an external fiber optic adapter, align the fiber connectors with the adapter ports, insert them carefully, secure the connection, and test for signal integrity.

Step 1: Identify Connector Types

Determine the type of fiber optic connectors on your cables (e.g., LC, SC, FC, ST, MPO) and the mode (single-mode or multi-mode). Choose an adapter that matches the connector types on each end or a hybrid adapter if connecting different types ().

Step 2: Prepare the Fiber Optic Cables

Clean the connector end faces using lint-free wipes and a fiber optic cleaning solution to remove dust or debris. Proper cleaning ensures minimal insertion loss and optimal signal transmission ().

Step 3: Insert the Connectors

- Align the ferrules of the fiber connectors with the alignment sleeve inside the adapter.
- Gently insert the first connector into one side of the adapter.
- Insert the second connector into the opposite side, ensuring both are fully seated and aligned ().

Step 4: Secure the Connection
