

How to wall-mount a fiber optic router

AI Overview

Installing a wall-mounted fiber optic router involves selecting the right enclosure, securing it to a suitable wall, managing fiber cables carefully, and connecting the router to the Optical Network Terminal (ONT) for optimal performance.

Step 1: Choose the Right Location

Select a dry, accessible wall near a power outlet and within 3 meters of your ONT if possible. Avoid areas with high humidity, direct sunlight, or extreme temperatures, as these can affect fiber performance. Ensure the location allows for minimal bending of fiber cables, maintaining at least a 30mm bend radius to prevent signal loss or damage .

Step 2: Gather Tools and Materials

You will need:

- Wall mount fiber enclosure or router box
- Drill, screws, and anchors (appropriate for wall type)
- Level and stud finder
- Pencil for marking
- Fiber optic patch cables (SC/APC connectors for GPON networks)
- Safety gear: gloves and safety glasses

Step 3: Prepare the Wall
