

# How to wire the lugs of a lighting distribution box

## AI Overview

To wire the lugs of a lighting distribution box, connect the incoming live, neutral, and earth wires to the main terminals, then distribute power to branch circuits via properly rated breakers, ensuring all connections are secure and clearly labeled.

### Step-by-Step Wiring Process

1. Safety First Always turn off the main power supply before starting any wiring work to prevent electric shock. Use insulated tools and wear protective equipment while handling wires and terminals (NUOMAK guide), . 2. Mount the Distribution Box Secure the box to a wall at an accessible height, ensuring it is free from obstructions. This allows easy access for maintenance and inspection (NUOMAK guide), . 3. Connect Incoming Wires to Lugs

- Live (Phase) Wire: Typically brown or red, connect to the main live terminal lug.
- Neutral Wire: Usually blue, connect to the neutral bar.
