

Indoor cable tray installation height

Overview

When vertically installed, the height of cable trays from the ground should not be lower than 1. If the above standards cannot be met, metal covers must be added for protection. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. The following pages address the 2014 National Electrical Code® requirements for cable tray systems as well as design solutions from practical experience. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. For 6 meter tray that would be approximately 1. This section will guide you through the necessary steps to ensure a successful.
