

Inspection Frequency Standards for Distribution Boxes

Overview

The SFG20 44-07 standard requires specific 6-monthly checks that include visual inspections for physical damage, verification of proper labelling, checking protective devices, identifying overheating issues, and ensuring overall functionality of distribution boards. Premier Technical Services Group Ltd (PTSG) has identified a significant compliance gap affecting many facilities management companies and building operators across the UK. The issue concerns SFG20 44-07 requirements for distribution board maintenance, which are often overlooked in standard. A significant number of facilities management providers across the UK are unknowingly failing to meet required maintenance standards for electrical distribution boards, according to industry experts. While the IEC 60364 standard. EX inspections verify that every junction box, light or motor installed in Zones 0-2 / 20-22 still meets its ATEX / IECEx protection rating. Initial → periodic → sample inspections catch corrosion, loose glands, non-Ex replacements and paperwork gaps—the very faults that ignite 30 % of industrial. HSE and other organisations have produced guidance on electrical safety that is suitable for a wide range of industries and technical competencies. Most of the information produced by the HSE is available for immediate download. Maintaining portable and transportable electrical equipment.
