

Integrated Power Supply with Three Functions

Overview

This device combines an adjustable DC stabilizer, a function generator and a three-phase generator as well as various AC/DC fixed voltages. These elements can be activated separately or in all different combinations. They are optimized with highly efficient synchronous buck converters capable of multiphase and single-phase operations that can deliver up to 5A per phase. The Siglent SPD3303C is a high-performance, programmable DC power supply with a resolution of 10 mV for voltage and 10 mA for current, offering precise and stable control for a wide range of test and development tasks. It provides three independent outputs (two adjustable up to 32 V / 3.2 A and one. Compact and multi-functional 4-fold supply unit for the field of electrical engineering fundamentals. The back-end DC-DC is a GaN half-bridge (HB) LLC converter with full bridge (FB) rectification, which provides safety.
