

Lights in the distribution box

Overview

Indication Lights: These provide visual availability and status of mains power supply. Each component plays a specific role. Together, they make sure the electrical power distribution box works well and safely. The lighting distro box is the central hub that safely delivers this. A distribution board (also known as panelboard, circuit breaker panel, breaker panel, circuit breaker, electric panel, fuse box or DB box) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit. The distribution box (DB box) helps safely and efficiently distribute electrical power. Also known as a distribution board or breaker panel, it acts as the control hub, distributing power to different circuits and protecting them from overloads and faults. These versatile components are essential for ensuring safe and efficient operation of lighting installations in diverse settings, from street lighting to commercial buildings.
