

Micro-module desktop proxy for computer rooms

Overview

microproxy is a lightweight non-caching HTTP/HTTPS proxy server. Single executable with no external dependencies. Single simple configuration file in TOML format. IP-based black and white access lists. Rocket Reflection Desktop Pro is an integrated terminal emulation and PC X server solution that connects desktop and mobile users to IBM®, UNIX, Linux, OpenVMS, HP 3000, HP NonStop, and X11 (X Window) systems. Secure, manageable, and easy to use, Rocket Reflection Desktop Pro continually delivers. Certificates can be installed via Intune for your Teams Rooms devices or via OEM tooling. Microsoft Teams Rooms does not support proxy authentication as it may interfere with regular operations of the room. A proxy server can help you apply an extra measure of security or apply company policies such as limiting internet usage. You can configure a Board, Desk, or Room Series device running RoomOS to use a proxy. MVC Room System is a Windows-based video conferencing system, equipped with Windows 10 IoT Enterprise system and a native Microsoft Teams Room app. It can provide video conferencing, content sharing, and other features to meet users' videoconferencing collaboration demands.
