

National Standard Dimensions for Network Cabinets

AI Overview

Standard network cabinets are typically 19 inches wide, with heights measured in rack units (U) and depths ranging from 15.5 to 30 inches depending on the type.

Width and Rack Unit Height

Network cabinets follow the 19-inch rack standard, meaning the distance between the mounting rails is 19 inches (48.3 cm) for all standard equipment . Heights are measured in rack units (U), where 1U equals 1.75 inches (44.45 mm) . Common cabinet heights include:

- 6U to 18U: Compact wall-mounted cabinets for SOHO or edge networking
- 42U: Traditional full-size enterprise standard
- 48U: Increasingly popular for large-scale data centers The vertical spacing between rails allows for proper mounting of equipment, with a minimum of 2U (3.5 inches / 8.8 cm) per chassis .

Depth

Cabinet depth varies depending on the intended use:

- Wall-mounted cabinets: Typically 15.5" to 17.7" (39.4-45 cm) to accommodate patch panels, routers, and small switches
- Floor-standing cabinets: 23" to 30" (58.4-76.2 cm) to allow for full-depth servers and rear-bracket installations Depth also considers airflow, cable management, and rear access requirements.
