

Nauru Polymer Cable Tray Specifications

AI Overview

FRP cable trays in Nauru are lightweight, corrosion-resistant systems available in ladder and channel types, suitable for industrial, commercial, and residential applications.

Material and Construction

FRP (Fiber Reinforced Polymer) cable trays are manufactured using polyester or vinyl ester resin reinforced with fiberglass, providing high strength-to-weight ratio and excellent corrosion resistance, making them ideal for harsh environments such as chemical plants or coastal areas . The trays are non-conductive, fire-retardant, and resistant to moisture, dust, and mechanical damage .

Types of FRP Cable Trays

- Ladder Type:
 - Composed of two longitudinal side rails connected by multiple rungs.
 - Ventilated design allows good heat dissipation.
 - Suitable for supporting multiple power or data cables over long spans .
- Channel Type:
 - Features a perforated or solid bottom with integral side rails.
 - Often used in fire-proof, moisture-proof, and anti-interference applications.
 - Can be equipped with flat or peaked covers for additional protection against environmental loads like snow or debris .
