

Patch Cord Fiber Optic SC

AI Overview

An SC-SC fiber optic patch cord is a short fiber cable with SC connectors on both ends, used to connect networking devices for signal transmission in single-mode or multimode systems.

Overview

SC-SC patch cords are fiber optic cables terminated with SC (Subscriber Connector or Standard Connector) connectors on both ends, designed for reliable and efficient signal routing between devices such as switches, routers, transceivers, and optical distribution frames . They are available in single-mode (OS1, OS2) for long-distance transmission and multimode (OM1, OM2, OM3, OM4) for shorter distances . Patch cords can be simplex (single fiber) or duplex (two fibers for bidirectional communication), depending on network requirements .

Connector Features

- **Shape and Mechanism:** SC connectors are square-shaped with a 2.5mm ferrule and use a push-pull locking mechanism, making them easy to insert and remove without tools .
- **Ferrule Material:** Typically made of zirconia ceramic, providing durability, low friction, and precise fiber alignment .
- **Polish Types:** Available in PC, UPC, or APC polish types, affecting insertion loss and return loss performance .

Technical Specifications

- **Insertion Loss:** Typically $\leq 0.2-0.3$ dB, ensuring minimal signal attenuation .
