

Price of Custom-Made Optical Modules for 10G Transmission Systems

AI Overview

Custom 10G SFP+ optical modules typically cost significantly more than standard modules, with prices influenced by fiber type, transmission distance, and tailored features.

Standard 10G SFP+ Module Pricing

For standard 10G SFP+ modules, prices generally range from \$10 to \$300 per unit, depending on factors such as transmission distance, optical technology, and brand reputation. Short-range (SR) modules for multimode fiber are at the lower end of the spectrum, supporting distances up to 300 meters, while long-range (LR) single-mode modules can cost more due to higher optical power and stricter manufacturing tolerances. Branded modules from major vendors often carry a premium due to support contracts and vendor lock-in strategies, whereas compatible third-party modules offer cost-effective alternatives without sacrificing performance for most enterprise and data center deployments.

Custom-Made 10G Modules

Custom-made modules, such as the Wolon 10GBASE-SR SFP+, are engineered for specific enterprise or data center requirements. These modules include features like:

- Custom EEPROM coding for seamless integration with proprietary switch environments, avoiding unsupported transceiver errors.
- Thermal-optimized laser configurations and tailored Digital Optical Monitoring (DOM) thresholds for precise operational conditions.
