

Price of electrical distribution boxes for safe construction sites

AI Overview

Construction site electrical distribution boxes with protective features typically range from \$200 to \$1,500 depending on size, phase, and safety specifications.

Overview of Construction Site Distribution Boxes

Construction site distribution boxes, also called site boxes or temporary power enclosures, are designed to safely distribute electricity from a main supply or generator to tools and machinery on-site. They include circuit breakers, residual current devices (RCCB/ELCB), and overcurrent protection, and are often rated IP44 to IP67 for water and dust resistance, and IK08 to IK10 for impact protection .

Factors Affecting Price

- Power and Phase Configuration
- Single-phase 16A-32A boxes for standard tools and lighting are on the lower end of the price spectrum.
- Three-phase 32A-63A boxes for heavy machinery or multiple circuits are more expensive due to higher current capacity and additional protection devices .
- Protection Level
- IP44/IP65 enclosures protect against splashing water and dust, suitable for outdoor construction sites.
- IP67-rated boxes offer full waterproofing for harsh environments, increasing cost .
