

Pricing Standards for Cable Tray Embedded Parts

AI Overview

Custom cable tray embedded parts can range from as low as US\$4 per meter, with prices influenced by material, finish, dimensions, and order volume.

Factors Affecting Price

- **Material Type:** Cable trays can be made from stainless steel (304/316), aluminum alloy, hot-dip galvanized steel, and other metals. Stainless steel and aluminum are more corrosion-resistant and durable, often increasing cost compared to standard galvanized steel .
- **Customization Options:** Prices vary depending on dimensions, thickness, perforation patterns, color finishes, and embedded components such as connectors and hanging parts. Fully customized trays for specific project requirements typically cost more than standard sizes .
- **Order Volume:** Bulk orders or factory-direct purchases often reduce the per-unit cost. Suppliers may offer OEM deals or volume discounts, which can significantly lower overall expenses .
- **Design Features:** Features like seismic resistance, space-saving layouts, and easy installation components can influence pricing. Trays designed for high-load or specialized environments may be priced higher due to enhanced engineering and safety standards .
- **Certifications and Compliance:** Products meeting ISO9001, CE, UL, IEC, or NEMA standards may carry a premium due to quality assurance and global compliance .
