

Revit cable tray annotation

AI Overview

Cable tray annotation in Revit allows you to display sizes, fittings, and connectors clearly, with options for automatic tagging and custom symbols.

Cable Tray Settings

Revit provides a Cable Tray Settings pane where you can control how annotations appear in your project. Key parameters include:

- **Use Annot. Scale for Single Line Fittings:** Determines whether fittings are drawn according to the Cable Tray Fitting Annotation Size parameter. Changing this does not affect already placed components .
- **Cable Tray Fitting Annotation Size:** Sets the plotted size of fittings in single-line views, maintaining consistent display regardless of drawing scale .
- **Cable Tray Size Separator:** Defines the symbol used to separate width and height in the annotation (e.g., 12" x 4"), .
- **Cable Tray Size Suffix:** Adds a symbol or text after the size for clarity .
- **Cable Tray Connector Separator:** Specifies the symbol used between different connectors . These settings ensure that your cable tray annotations are consistent and readable across different views and scales.

Tagging Cable Trays

To annotate cable trays in Revit:

- Go to the Systems tab and select Electrical → Cable Tray.
- Choose the desired type from the Type Selector, with or without fittings.
