

Saudi Arabia QSFP-DD optical module LPO

AI Overview

QSFP-DD LPO modules provide high-speed, low-latency optical connectivity for 400G and 800G networks, ideal for AI/ML, data center, and DCI applications.

Overview of QSFP-DD LPO Modules

QSFP-DD (Quad Small Form-Factor Pluggable Double Density) modules are high-performance optical transceivers designed to meet the growing bandwidth demands of modern data centers, cloud computing, and 5G networks. LPO (Linear Pluggable Optics) variants of QSFP-DD are optimized for low-latency, high-bandwidth PCIe Gen 5.0 over optical links, enabling efficient rack-to-rack and switch-to-server interconnects. These modules are particularly suited for AI/ML workloads, GPU-to-GPU connectivity, and high-speed server disaggregation.

Key Features and Advantages

- **High Bandwidth and Density:** QSFP-DD modules support 400G and 800G Ethernet speeds, doubling the number of electrical lanes compared to traditional QSFP modules, which allows higher port density without increasing rack space.
- **Low Latency and Power Efficiency:** LPO modules are designed without DSPs or CDRs, significantly reducing latency and power consumption compared to conventional DSP-based transceivers.
- **Compatibility:** QSFP-DD modules maintain backward compatibility with legacy QSFP ports, allowing gradual network upgrades while protecting previous infrastructure investments.
