

Sierra Leone Optical Cable Production

AI Overview

Sierra Leone is actively expanding its optical cable infrastructure, primarily through imports and deployment projects rather than large-scale domestic manufacturing.

National Fibre Optic Backbone and Deployment

Sierra Leone's optical cable network is being significantly expanded under the National Fibre Optic Backbone Project, financed in part by a US\$30-million loan from the Exim Bank of China. This project, executed by Sierra Leone Cable Network (SALCAB) in partnership with Huawei, covers 690 km of fiber optic cable connecting 19 cities and serving approximately 2.6 million people. The initiative aims to extend 3G and 4G services to unconnected regions and includes the construction of new metropolitan area networks. The backbone is linked to the Africa Coast to Europe (ACE) submarine cable, which landed in Sierra Leone in 2012, providing international connectivity.

Market and Industry Players

The fiber-optic market in Sierra Leone is monitored by research firms like 6Wresearch, which track trends, growth drivers, and revenue forecasts for fiber optic cables and cable assembly products. While domestic production is limited, companies such as Ultra One are pivotal in deploying and managing national fiber infrastructure. Ultra One emerged from the merger of ZoodLabs and Metro Cable, combining expertise in broadband innovation and fiber-optic backbone deployment. The company also invests in 5G Open-RAN infrastructure, enabling flexible, vendor-neutral connectivity for mobile operators, ISPs, and enterprises.
