

Small businesses should choose access layer switches

From standard 1U to 8U sizes to
fully customized Non-standard enclosures.

Overview

For most small businesses a managed Gigabit switch with PoE on some ports is the best choice. If you need higher throughput for servers or virtualization, choose a 10G-capable distribution switch and keep cheaper Gigabit switches at the access layer. HPE and Netgear are strong picks. When choosing access layer switches, there are many points to consider, such as port density, port speed, security, scalability, deployment and management methods, as well as cost. Port density refers to the number of ports available on a single switch. LN-2316XF8C-4XGF The LN-2316XF8C-4XGF are high-performance 28-port Layer 2 Gigabit access switches specially designed for business use. It is generally advised to use low-cost equipment.
