

Specifications and Models of Cable Trays in China and Africa

AI Overview

Tray-type cable trays in China and Africa are available in steel, stainless steel, aluminum, and FRP, with variations in load capacity, corrosion resistance, and design to suit industrial, commercial, and harsh environmental applications.

Chinese Tray-Type Cable Trays

Materials and Construction: Chinese cable trays are commonly manufactured from carbon steel, stainless steel (304 or 316), aluminum, and fiberglass reinforced plastic (FRP). Carbon steel trays offer high mechanical strength and load-bearing capacity, suitable for heavy-duty industrial applications. Stainless steel provides superior corrosion resistance for chemical plants, marine environments, and outdoor installations. Aluminum trays are lightweight and corrosion-resistant, ideal for telecommunications, rooftop installations, and transportation infrastructure. FRP trays are non-conductive and resistant to extreme conditions, making them suitable for oil refineries, wastewater treatment plants, and hazardous locations . **Types and Features:**

- **Perforated Trays:** Steel, stainless steel, or aluminum with punched holes for ventilation and heat dissipation, commonly used in data centers and high-density cable installations .
- **Solid Bottom (Trough) Trays:** Fully enclosed for maximum protection against dust, moisture, and electromagnetic interference, ideal for sensitive cables .
- **Wire Mesh (Basket) Trays:** Lightweight, flexible, and easy to install, suitable for complex routes and data centers .
