

Specifications of hollow cable trays in Iraq

AI Overview

Hollow cable trays in Iraq are available in steel, stainless steel, and aluminum, conforming to international standards like ASTM, ISO, and NEMA, with various finishes and load capacities suitable for industrial and commercial applications.

Materials and Construction

Hollow cable trays, often referred to as cable ladders or trunkings, are manufactured from pre-galvanized steel, stainless steel (AISI 316), or aluminum, providing high strength-to-weight ratios and corrosion resistance. Stainless steel trays are particularly suitable for harsh environments, while aluminum trays offer lightweight and cost-effective solutions. The trays are designed with ventilated or solid bottoms, and side rails for structural integrity, ensuring safe cable support and easy maintenance.

Standards and Compliance

Cable trays supplied in Iraq typically comply with ASTM A123, ISO 1461, NEMA VE 1-2017, and UL certifications, ensuring durability, safety, and compatibility with electrical codes such as ANSI/NFPA 70 (National Electrical Code). These standards cover material quality, corrosion protection, and mechanical strength.
