

Suspended in the middle cable tray

Overview

Suspended Mounting with Rods: This method uses threaded rods to suspend the cable tray from the ceiling. This also allows for easier cable access during maintenance. Whether you're running cable tray, basket or conduit, Gripple suspension systems make installation quicker, discreet and easier to adjust, without the extra hassle of cutting rod or handling long lengths of strut on-site. Can be used indoors and outdoors. Cable trays or cable ladders can be mounted both in a lengthwise and a transverse direction beneath previously installed cable sections. It's ideal for ensuring your trays are at the correct height while keeping cables out of the way.

Article Content

Cable Trays

A cable tray is a bridging system used to suspend and support insulated electrical cables and wiring. In addition, they are designed to protect and safely carry
