

Switch Aggregation Experiment Configuration

Overview

Please use the following topology to complete this lab exercise: Lab Walkthrough: Connect two switches together as per the diagram. Configure the Ethernet interfaces on the switches. The trunk group of SwitchA is composed of fa0/1, fa0/2, fa0/3, and fa0/4. The port mode of smartgroup is trunk. Carry. Link aggregation is mainly used to connect between the access layer switch and the aggregation layer switch, so that the transmission rate is greatly improved. Here I will briefly talk about the main role of aggregation, and only provide configuration without giving in-depth explanations to the. Learn how to configure port aggregation using Port Aggregation Protocol (PAgP). Lab Purpose: Collecting interfaces or ports into one big virtual interface is known as link aggregation, link teaming, NIC teaming, or port channeling. This chapter also describes the configuration procedures. When you are working on a live network, make sure you.
